EDUCATION

Hong Kong Baptist University (Zhuhai Campus) — B.Sc. Computer Science and Technology Sep 2025 – Present
CGPA: 3.85 / 4.0 (Top 2% of major; perfect scores in all Math and CS courses)

AWARDS & COMPETITIONS

Guangdong Provincial High School Mathematics Olympiad — Third Prize (cold entry)	Nov 2024
MCM (COMAP Mathematical Contest in Modeling) — Meritorious Winner (Top ~7%)	Feb 2026
BNBU Programming Contest — Silver Award	Nov 2025

PROJECTS

Cross-Market Idiosyncratic Return Reversion github.com/Fisheraaa/cross_mkt_idio_reversion Jul 2026

- 11-stage iteration: daily signals (OOS ≈ -37 bps) $\rightarrow$ 2-hr idiosyncratic reversal ($\approx +17$ bps); pre-declared dynamic-beta hedges on 13 crypto perps, XGBoost monthly expanding filter, full multi-leg cost model, 29 automated tests.
- Validation 2.41 $\times$ cost coverage (front half 3.1 $\times$); second-half alpha decay to 0.33 $\times$ caught by dual-pass gate — strategy suspended, test set locked for forward verification.
- Root cause: spread AR(1) ≈ 0.998 (no stable price anchor), raw signal ≈ 19 bps below net cost ≈ 29 bps; roadmap: cointegration/ECM spread + pre-declared regime filter.

Individual Stock Intraday Alpha (688981) github.com/Fisheraaa/DayAlpha_688981 Jun 2026

- 4-model ensemble (Transformer-LSTM, VanillaLSTM, CNN-LSTM, MLP) for 30-min intraday prediction on SSE 688981; 28-feature IC selection ($|IC| \geq 0.008$), PurgedKFold Walk-Forward, Optuna TPE tuning; live feed via VeighNa + TongDaXin.
- Full-year 2024 OOS (round-trip ≈ 20 bps): +4.94% return, Sharpe 0.804, max drawdown 6.37%, win rate 42.4%, profit factor 1.62, positive Kelly expectation.
- SHAP / integrated gradients / permutation importance all rank time-encoding features (time_cos/time_sin) as dominant predictors; limitation: 250-trade OOS (t-test $p \approx 0.22$); next: Level-2 data + multi-stock cross-section.

Systematic Alpha Research & Trading Framework github.com/Fisheraaa/SystematicAlpha May 2026

- End-to-end quant pipeline: point-in-time universe (survivorship-bias-free), 6-factor library with automated look-ahead bias detection, rank-based IC analysis, volatility regime classification with adaptive factor weighting, and realistic A-share cost model (commission + stamp duty + slippage).
- 15-window walk-forward validation (24-month train / 6-month test); rolling Sharpe ranged -3.3 to +2.8, with peak during policy-driven reversals (2022 Q4 rebound Sharpe = 2.58).
- Factors show statistically significant cross-sectional predictability (peak ICIR = 0.22, $p < 0.001$); decomposed alpha decay from beta drag and proposed equity index futures hedging as next step.

Semi-Automated Quantitative Trading System github.com/Fisheraaa/AI_Trader Apr 2026

- Event-driven signal pipeline (data ingestion $\rightarrow$ feature engineering $\rightarrow$ multi-factor signal generation $\rightarrow$ decision dispatch) with decoupled, hot-swappable modules.
- Multi-dimensional technical system (MACD, moving averages, etc.) with LLM multi-agent debate as a second-pass filter to suppress low-quality signals.
- Containerized (Docker + WSL2): data/analytics/execution layers decoupled; full-automation interface (OpenClaw) reserved.

Blockchain Transaction Anomaly Detection github.com/Fisheraaa/ETHanomaly Feb 2026

- Streamed and persisted real-time on-chain data from Ethereum Sepolia testnet via Infura API.
- IQR + percentile threshold anomaly detection to auto-flag suspicious high-value/high-frequency transfers; interactive Streamlit + Plotly dashboard with filtering, time-slicing, and address tracking.

TECHNICAL SKILLS

Languages: Python, Java, C (proficient); JavaScript, HTML, CSS, PHP, MySQL, Linux CLI (basic)

Data Science: Python + KNIME — data cleaning, feature engineering, visualization, ML modeling

Quant / Modeling: TOPSIS, AHP, Monte Carlo simulation, Markov chains, backtesting fundamentals & risk metrics

Engineering: Docker, WSL2, Git, LaTeX, Notion; Web3 basics; industry research (PC gaming sector)

AI Workflows: LLM-assisted dev (Claude + Codex); vibe coder with strong architectural awareness

Languages: Cantonese (native), English (full university instruction; working proficiency), Mandarin (fluent)
